

**CODE:**

```
public class Main
{
    public static void main(String[] args)
    {
        //create 2 Die objects
        //roll the dice
        //if possible print their face values

        Die die1 = new Die();
        Die die2 = new Die(5);
        Die die3 = new Die();
        int count = 0;

        System.out.println(die1 + "," + die2);

        die1.roll();
        die2.setFaceValue(3);

        System.out.println(die1 + "," + die2);

        for(int num = 1; num <= 100; num++)
        {
            die3.roll();
            if(die3.getFaceValue() == 3)
            {
                count++;
            }
        }
        System.out.println(count);
    }
}
```
